CRC

Dear Madam or Sir:

I would like to recommend Alberto Andreotti for your PhD research fellowships. Alberto was a student of mine in a postgraduate program in Distributed Systems at the Faculty of Mathematics, Astronomy and Physics and a colleague of mine at Intel Corporation.

As a student, he made insightful, interesting remarks on crucial concepts. He did manage to complete our very demanding program being at the same time a full time employee. Alberto showed remarkable dedication and enthusiasm.

At Intel, he helped me developing a novel knowledge representation database based on message passing and graphs. Alberto contributed actively to the project and was capable of dealing with the concepts and technology that were required and that were novel to him.

I think he is the kind of student that will do very well in an international research environment.

If you need any more details, I will be happy to provide them.

Sincerely,

Prof. Dr. Gabriel Infantel López
